

DatapointLabs Is Up and Running in New Facility, Poised for Growth

After more than 25 years of providing expert material testing services, DatapointLabs has moved up! Geographically, our new facilities are two miles north of our longtime base. Now you can find us at 23 Dutch Mill Road, Ithaca, NY 14850 USA. Our telephone numbers, email addresses, and website addresses remain unchanged. Thanks to our amazing team, we are ready for our new phase of expansion!

Our newly-renovated building includes fully equipped laboratory space dedicated to testing capabilities for mechanical, thermal, rheological, and creep properties. There is ample room for future expansion, both in capacity of current testing services, as well as the potential addition of new services.

We accomplished the move in stages during the month of May 2021, to minimize downtime and disruption to testing schedules. We greatly appreciated our clients' patience during this period of transition. As of June 2021, we have resumed normal operations in our new facilities.

We are grateful to our clients for your patience and understanding during our move!

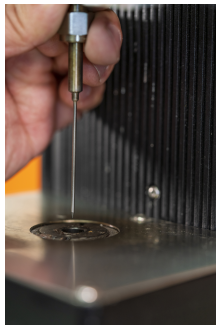

mechanical testing capabilities

pvt testing capabilities

thermal testing capabilities

rheology testing capabilities

strengthening the materials core of manufacturing enterprises
